

中国科学技术大学 2002 年自动控制原理 845 真题解析

一、解：

2. ① $r(t)=1, n(t)=0$
 示该为 I 型示统.

$\therefore e_{ssr} = 0$

② $r(t) \rightarrow \infty, n(t) = 1$

$$\Delta = 1 + \frac{2}{1+s} + \frac{2(4s+1)}{s(4s+1)(s+1)}$$

$\Delta_1 = \frac{1}{s}, P_1 = 1.$

$$\Phi_n(s) = \frac{P_1 \Delta_1}{\Delta} = \frac{(4s+1)(s+1)}{s(4s+1)(s+1) + 2s(4s+1) + 2(\alpha s+1)}$$

$C_n(s) = \Phi_n(s)R(s)$

$E_n(s) = -C_n(s) = -R(s)\Phi_n(s).$

$e_{ssn}(\infty) = \lim_{s \rightarrow 0} s E_n(s) = \frac{1}{2}.$

$e_{ss}(\infty) = e_{ssr} + e_{ssn} = 0 + \frac{1}{2} = \frac{1}{2}$
